

LandTracker Maps

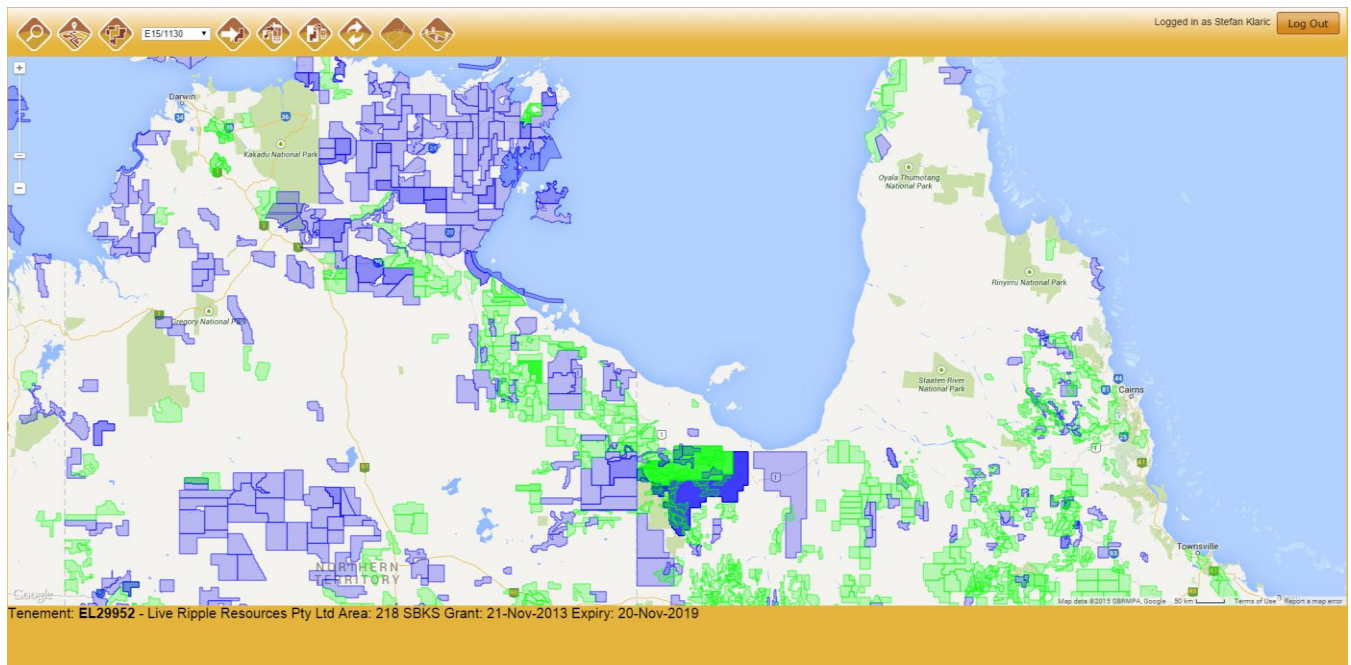

FREE up-to-date Australia wide tenement mapping and details on Google Maps

LandTracker Maps is a convenient, practical application that enables you to see up-to-date details of all mining tenements in Australia. The application is provided free of charge and based on Google Maps. It is designed to work on your PC, tablet or mobile phone, with details of mining tenements updated daily from key government databases.

To access **LandTracker Maps** go to www.landtracker.com.au and simply register your email address, a password and accept the conditions of use.

Key features are:

- Search for tenements by ID or location
- View tenements in satellite or map view
- Show and hide surrounding tenements with or without labels
- Navigate through a tenement list
- Create a GPX file of tenement boundaries to transfer to your GPS
- Receive a weekly “LandWatch” notification email of new application in an area of interest
- Drill down through multiple tenements overlayed over each other

About LandTrack Systems

LandTrack Systems is an Australian owned company based in Perth established in 2004 developing innovative web-based applications to address the needs of the Australian mining industry. We have developed a reputation for innovation, reliability, quality and support. Our client base spans major mining companies to junior explorers.

Our first product, **Mineral Titles Audit** was released in 2005 and is being used by most mining companies and consultancies in WA to assist with their tenement compliance and land acquisition activities and in 2018 has been replaced by LandTracker Data Analysis. In 2006 **Tenement Safety Net** was released, providing an independent report of tenement critical actions with up-to-date information on compliance status. In 2007 we developed **Expenditure Watch** to help track expenditure commitments, using existing accounting and tenement databases. Then came **GeoSearch** in 2008, marking the start of a family of GIS based applications providing automated exploration intelligence. In 2012 we developed a free Google Maps based app called **LandTracker Maps** enabling users to view tenements across Australia. Our latest development **LandTracker**, is an asset management system that tracks and manages Mineral Title compliance and agreements.
